**Subject:** FW: FOIA Request EPA-R4-2013-005496 "Blending"

Ms. Sedlacek:

As requested, please find a list of NPDES permitted facilities in R4 that appeared to have bypass/blending components when we reviewed the draft state NPDES permits since 2008 or thereabouts. This is based on my memory and my staff's with some brief simple searches of our records.

Dear Ms. Pressley,

Per our earlier conversation, you had stated that there were at least three examples of facilities where blending was an issue. Can you please provide the names of those facilities (no records are necessary)? And if there are any others that any of the permit writers can think of off the top of their heads, can you provide the names of the facilities? At this point, we do not need any of the documents/records related to those permits.

Thank you for assistance in this matter.

Best,
